

Determine how many servers you will have.

Created and last modified by Eric Remington on Jul 29, 2014

Integer supports install configurations of the following server configurations. Choose one type for your installation.

- [Server Configurations](#)
 - [One server](#)
 - [Two servers](#)
 - [Three servers \(Planned, not yet supported \)](#)
- [Server Considerations](#)
 - [Core](#)
 - [Front End](#)
 - [Discovery](#)

Server Configurations

1. **One server**
 - a. Core, Discovery and Front End are installed on one server.
2. **Two servers**
 - a. Core and Discovery installed on one server, possibly in a restricted network.
 - b. Front End installed on a different server possibly in a more or less restricted network then the Core
3. **~~Three servers (Planned, not yet supported)~~**
 - a. ~~Core installed on one server, possibly in a restricted network.~~
 - b. ~~Front End installed on a different server possibly in a more or less restricted network then the Core~~
 - c. ~~Discovery Node installed in a different or remote network.~~

Server Considerations

- **Core**
 - The Core server requires a bidirectional connection to the Front End and Discovery servers.
- **Front End**
 - The Front End server is a remote server on which you may access the Integer GUI
 - The Front End server requires access to the Core.
- **Discovery**
 - ~~The Discovery Server requires access to the managed networks and access to the Core.~~
