

Quick Background/Assumptions:

- It is given that we have to do better in the operation of our services and that management software is an important element of that improvement process.
 - We want to use end user services as a key organizing principle.
-

Meeting Objectives:

- Through the demonstration of Integer in its current form, illustrate a way to provide an end user service oriented system, that is scalable and cost effective with delivery of incremental releases that will improve operations.
 - Illustrate key requirements of any system that is to act as a platform for our service oriented organization and how a system can help as we migrate from our datacenter-centric world to a more diversified environment.
-

Additional Topics for future meetings:

- Plan for a path forward.
 - Discussion of Integer risks and pre-requisites for success.
-

Requirements Collection Process in Email of August 7.

- Feedback on general ideas.
- Recommendations for participants for the different mini-groups.
