

How to tell what build and how to use local tgz files to reinstall

Created by Eric Remington on Aug 20, 2014

SOC Servers.

The information in this page is correct only for the Soc Servers integer-fe-0 and integer-app-0.

Where is build number found in the install?

cat the file `/opt/integer/installs/BN`

How can I determine the build number I am running right now?

The build number file (BN) is copied into the wildfly directory right after wildfly is extracted during the install; cat te file `/opt/integer/wildfly/BN`

How can I install an older version of Integer on the soc servers?

The install preserves the installables in the directory `/opt/integer/installs.<Build Number>`. As long as you still have this directory you can do the following:

1. `cd /opt/integer`
2. If needed rename the installs dir to preserve it.
3. rename `/opt/integer/installs.<build number you desire>` to `/opt/integer/installs`
